

Proof of Concept (PoC) Plan of Action Document

Project Title: Wealth Management & Relationship Intelligence Platform

1. PoC Objectives

The PoC will demonstrate a minimal but functional end-to-end experience for the three primary personas (Investors, Relationship Managers, and Admin Users). The objective is to validate core business workflows, technical feasibility, and present a polished clickable prototype for investor meetings.

Investors:

View portfolio summary, committed tenure, returns, and maturity timeline. Raise withdrawal requests and view request status across workflow stages. Access assigned RM contact details, message or book calls, and upload basic KYC documents.

Relationship Managers (RMs):

View assigned clients and AUM summary (MTD/QTID/YTD). Access client portfolio snapshots and pending withdrawal requests for review. Approve, forward, or comment on withdrawal requests; manage follow-ups and tasks.

Admin Users:

Create and manage users/RMs, assign investors, and configure product rules. View system-wide AUM dashboard, transaction summaries, and operational queues. Simulate approvals and run basic reports for the PoC demo.

Core Deliverable: A working web-based PoC platform showing the above 3 role-based experiences, integrated with mock data and essential workflows.

2. Scope of the PoC

The following table indicates what will be included in the PoC and what will be deferred to a full build:

Area	Scope in PoC	Deferred to Full Build
Authentication	Login for all roles, basic RBAC	SSO, 2FA, OAuth
Dashboards	Investor, RM, Admin overviews	KPI analytics, advanced charts
Workflow	Onboarding, Withdrawal Request	Complex Maker-Checker, Audit exports
Data Layer	Mock database or limited backend	Integration with fund admin APIs

UI/UX	Responsive, modern web layout	Mobile app, theming, localization
Compliance	Dummy KYC flow	Full KYC/AML integrations
Notifications	In-app alerts	Email/SMS, push notifications
Security	JWT/session-based auth	Vault/KMS integration, IDS/WAF layers

5. User Roles & Permissions (RBAC)

Role	Access Level	Key Actions
Admin	Full CRUD	Create RMs/Users, Assign Clients, Approve Requests
Relationship Manager	Read/Write (own clients only)	View Client Portfolios, Approve Requests
Investor	Read/Request	View Portfolio, Raise Withdrawals, View RM Info

12. Post-PoC Roadmap (Indicative)

After investor validation, the team will scale the PoC into a production-grade MVP with:

- Secure API integrations with fund administrators/custodians
- Real-time portfolio valuation via APIs
- KYC & compliance workflow automation
- Mobile app (React Native)
- Multi-currency & localization support
- Advanced analytics dashboards (AI-driven insights)

13. Team & Responsibilities (for PoC)

- **Project Lead:** Client coordination, roadmap validation
- **Frontend Developer:** UI implementation, component logic
- **Backend Developer:** API development, data modeling

- **Designer:** UI/UX wireframes and design consistency
 - **QA Engineer:** Workflow testing and feedback
 - **DevOps (Optional):** Deployment, CI/CD setup
-

14. Expected Outcome

By the end of this PoC:

- The client will have a live demonstrable prototype suitable for investor showcases and technical validation.
 - The product vision will be backed by tangible UI/UX flows and system design.
 - Technical and business teams will have alignment for next-stage funding and scaling.
-
