

1) Product Objectives

- Give investors (users) a single place to see: total invested amount, committed tenure, portfolio growth/valuation, RM details, and raise withdrawal requests.
- Give RMs a pipeline view of assigned clients, AUM/portfolio totals, upcoming commitment maturities, and recent onboardings—plus fast responses to client requests.
- Give Admins full control over onboarding, assignments, lifecycle changes, compliance states, and business KPIs across the book.

2) User Roles & Permissions (RBAC)

- **Admin**
 - Full CRUD on RMs and Users; assign/reassign customers to RMs; close/delete accounts (with maker–checker if required).
 - Configure products (schemes), fees, tenure rules, withdrawal rules/windows, holidays, and risk flags.
 - View firm-wide dashboards, KPIs, exports, audit logs.
- **Relationship Manager (RM)**
 - Read/write on own book only (assigned clients).
 - Update KYC progress notes, meeting notes, tasks, and next actions.
 - Approve/forward client requests (e.g., withdrawals) per policy; can't change core product rules.
 - See alerts for upcoming maturities, large movements, and at-risk clients (inactive, poor performance, failed KYC).
- **End User (Investor)**
 - Read portfolio (current value, gain/loss, IRR/XIRR), commitments (start date, maturity date), and documents.

- Raise service tickets and withdrawal requests (subject to rules).
- See assigned RM's profile and contact options; book a call; secure in-app messaging.
- Update contact info, upload KYC docs, manage 2FA, set notification preferences.

3) Core Feature Set

A) End-User Portal

1. Portfolio Overview

- Total invested, current value, absolute & % return, IRR/XIRR, realized vs unrealized P&L.
- Breakdown by product/scheme, asset class, currency.
- Time-period selectors (YTD, 1Y, Since Inception).

2. Commitments & Tenure

- For each investment: committed tenure, start date, maturity date, lock-in rules, penalty terms.
- Visual timeline of upcoming maturities.

3. Transactions

- Inflows (subscriptions/top-ups) & outflows (withdrawals/redemptions), fees, taxes, NAV/ref values (if applicable).
- Export PDF/CSV statements.

4. Withdrawal Request

- Guided request form with eligibility checks (lock-in, partial vs full, min balance).
- Dynamic estimate of proceeds, fees/penalties, and processing SLA.

- Status tracking: Draft → Submitted → RM Review → Ops Review → Approved/Rejected → Settled.

5. RM Contact

- RM card: photo, name, email, phone, WhatsApp (optional), calendar link, office hours.
- “Message RM” (in-app), “Book a call,” “Request review.”

6. Profile & KYC

- Personal details, bank mandate, nominees, address proof, ID proof upload.
- KYC status and renewal reminders.

7. Notifications

- Email/SMS/push for: contributions posted, valuation updates, maturity alerts (e.g., 60/30/7 days), withdrawal decisions, document approvals.

B) RM Dashboard

1. Book Overview

- Total AUM (assigned), # clients, inflows/outflows MTD/QTD/YTD, pipeline (prospects).

2. Client List & Segments

- Filters: AUM tier, risk profile, tenure remaining, activity (active/inactive), KYC status.
- Quick actions: call, message, log meeting, create task, upload docs.

3. Maturity & Onboarding Watchlists

- Upcoming maturities (next 90/60/30/7 days) with suggested actions.
- Recently onboarded clients (last 30/60/90 days) with follow-up tasks.

4. Requests & Tasks

- Queue of client service tickets and withdrawal requests needing RM attention.

- SLA timers, escalation badges, assignment to ops (if applicable).

5. Client 360

- For a selected client: holdings, transactions, performance, risk profile, financial goals, notes, documents, KYC state, communication history.

6. Performance

- Personal KPIs: total AUM, net flows, retention rate, NPS from assigned clients.

C) Admin Console

1. User & RM Management

- Create/disable RM accounts, set territories/teams, reassign client books (bulk and single).
- Create/disable investor accounts; close accounts (with offboarding checklist).

2. Product & Rule Engine

- Define products/schemes: name, currency, min investment, fees, valuation frequency, tenure options, lock-in rules, early-exit penalties, withdrawal windows, cut-off times, holidays.
- Versioning & effective-date management.

3. Compliance & Audit

- KYC/AML status board; PEP/sanctions flags; pending verifications.
- Full audit trail (who changed what, when); immutable logs.

4. Request Operations

- Global queue of withdrawals/redemptions with filters, bulk approvals (with maker-checker).
- Payment batch files (if integrated) and reconciliation statuses.

5. Insights & Exports

- Firm-wide KPIs, RM comparisons, cash-flow forecasts, maturity ladders.

- CSV/Excel/PDF exports; scheduled reports.

4) Key Workflows (Happy Paths + Guardrails)

4.1 Onboarding & Assignment

- Admin creates User → captures KYC → assigns to RM (manual or rules-based: territory, AUM tier, round-robin).
- **Acceptance Criteria:** User can log in, see RM details; RM sees client 360; KYC state visible; audit entry created.

4.2 Investment Recording & Valuation

- Admin/Ops posts contributions and valuations (manual upload or API from custodian/fund admin).
- System recalculates portfolio values and returns metrics.
- **Acceptance Criteria:** User & RM dashboards reflect updated AUM within configured valuation frequency; delta visible in activity log.

4.3 Withdrawal Request

- User initiates → system checks eligibility (tenure/lock-in/limits) → shows estimate & SLA → submit.
- RM review (optional) → Ops/Compliance approval → payout integration or settlement recording → status update to User.
- **Acceptance Criteria:** Ineligible requests blocked with clear reason; eligible requests flow with SLA timers; notifications fired at each stage.

4.4 Reassignment (Change RM)

- Admin selects client(s) → choose new RM → confirm and log reason.

- **Acceptance Criteria:** New RM gets all visibility; old RM loses access; user notified of RM change.

4.5 Account Closure

- Admin triggers closure checklist (pending requests, negative balances, KYC retention) → closes account.
- **Acceptance Criteria:** User login disabled; records retained per policy; audit log entry; optional exit statement produced.

5) Data Model (High-Level)

- **User (Investor)**
 - id, name, email, phone, country, address, DOB, KYC_status, risk_profile, nominee(s), bank_account_ref, preferences, created_at/updated_at.
- **RelationshipManager**
 - id, name, email, phone, team, territory, status, created_at/updated_at.
- **Assignment**
 - id, user_id, rm_id, start_date, end_date, reason, created_at.
- **Product/Scheme**
 - id, name, currency, min_invest, fee_structure, valuation_freq, tenure_options, lock_in_rules, early_exit_penalty, withdrawal_rules, status, effective_dates.
- **InvestmentPosition**
 - id, user_id, product_id, units/quantity (if applicable), cost_basis, start_date, committed_tenure_months, maturity_date, status.
- **Transaction**
 - id, user_id, product_id, type (subscription/top-up/withdrawal/fee/tax), amount, nav/ref_price, units, trade_date, value_date, status, reference.
- **ValuationSnapshot**

- id, user_id, product_id, date, nav/ref_price, market_value.
- **WithdrawalRequest**
 - id, user_id, product_id, request_date, requested_amount/type (full/partial), eligibility_result, fees_estimate, SLA_due, status (Draft/Submitted/RM_Review/Ops_Review/Approved/Rejected/Settled), notes.
- **Task/Interaction**
 - id, owner_type (RM/Admin), user_id (optional), type (call/meeting/note/ticket), due_date, status, priority, content.
- **Document**
 - id, owner_id, owner_type, kind (KYC, statement, proof), file_ref, status, created_at.
- **AuditLog**
 - id, actor_id, actor_role, entity_type, entity_id, action, before/after (JSON), timestamp, ip.

6) Dashboards, KPIs & Reports

End User

- Portfolio value, absolute/% return, IRR/XIRR.
- Upcoming maturities timeline; recent transactions.
- Request statuses (with SLA countdowns).
- Download statements & tax packs.

RM

- AUM (assigned), net flows (MTD/QTQ/YTD), # clients, average AUM/client.
- Upcoming maturities (# & value by week), new onboardings (last 30/60/90 days).

- Open requests by SLA stage; personal response time; client NPS/CSAT.
- Leakage/attrition indicators (clients inactive >90 days, negative return streaks).

Admin

- Firm-wide AUM; net flows; AUM by product; concentration by RM/territory.
- Maturity ladder (weekly/monthly), liquidity needs forecast.
- Withdrawal funnel (Submitted→Settled) with average TAT; rejection reasons.
- KYC/Compliance heatmap; audit exceptions; operational load by team.
-

8) Security, Compliance & Governance

- SSO + 2FA (SMS/Authenticator app) for all roles.
- Field-level encryption for PII & bank details; secrets in vault (KMS/HSM).
- Role-based access; row-level security (RMs see only assigned clients).
- Maker–checker on sensitive actions (approvals, account closure, bulk reassignment).
- Full audit trail & tamper-evident logs.
- Data retention & right-to-erasure policies per jurisdiction.
- Rate limiting, WAF, IPS/IDS, vulnerability scans & pen-tests.
- Configurable SLAs and escalation policies on requests.

9) Non-Functional Requirements

- **Availability:** 99.9%+; read replicas for analytics.
- **Performance:** P95 < 1.2s for key screens (portfolio, RM list).

- **Scalability:** multi-tenant ready; 100k+ clients; 1M+ transactions.
- **Observability:** structured logs, metrics, traces, alerting.
- **Accessibility:** WCAG 2.1 AA for portals.
- **Internationalization:** multi-currency, locale-aware dates & formats.
- **Platforms:** Web first; responsive; iOS/Android later.

12) Reporting & Exports

- Periodic portfolio valuation report (daily snapshot); cash-flow forecast.
- Maturity ladder export; withdrawal pipeline report.
- RM performance pack (AUM, flows, retention, NPS).
- Compliance pack (KYC states, exceptions, audit log summary).
